

Resources for the Dental Office

CDA's Resource Centre offers a full range of services to meet members' clinical, practice management and oral health research needs. This article is part of an occasional series to help better inform readers on topics of interest by providing answers to actual questions posed to the Resource Centre. If you have a topic you would like the CDA Resource Centre to address, email your question to library@cda-adc.ca.

In the online age, it is tempting to assume that all knowledge can be found on the Internet. While there are many very useful dental and medical resources online, print books still prevail as an easily accessible way to answer some of the various questions encountered in a dental practice. The CDA Resource Centre has put together a bibliography of some must-have resources on topics that would apply to any dental office. Most dental practitioners probably have some old, dusty textbooks lying around, but keep in mind these resources may be outdated or there may be some gaps in your collection. Having an up-to-date reference collection at your clinic will provide resources for you and your staff to help you deal with any question or situation that may arise.

Drug guides

- LEXI-COMP® Online™, CDA Edition (<http://www.cda-adc.ca/lexi>)

While there are many different print drug guides, we recommend LEXI-COMP® Online™, CDA Edition, available to CDA members. Users have access to 2 Lexi-Comp databases, Lexi-Drugs® and Lexi-Natural Products™ — all updated daily. Also includes customizable patient advisory leaflets for adult and pediatric patients. Print documentation simply doesn't compare to this online service's ease of use, comprehensiveness and accuracy. ✨
